Education

City University of Hong Kong <i>Bachelor of Science in Computer Science; Minor in Mathematics</i>	Hong Kong SAR <i>Expected 2029</i>
- Cumulative GPA: 3.84/4.30. - Dean's List (Semester A & B, 2025/26). - Full Scholarship recipient and Tiger Programme student. - Relevant coursework: Linear Algebra, Calculus, Computational Probability Modeling, Business Statistics, and Data Structures & Algorithms.	

Research Interests

Machine Learning, Deep Learning, Data Science, Applied AI

Selected Projects

Titanic Survival Prediction <i>Python, Pandas, scikit-learn, XGBoost</i>	Kaggle
- Built an end-to-end classification workflow covering EDA, missing-value handling, feature engineering, and model evaluation. - Conducted experiments with Random Forest and XGBoost models to analyze feature impact and improve predictive performance.	
House Price Prediction <i>Python, Pandas, scikit-learn, XGBoost</i>	Kaggle
- Built an end-to-end regression workflow including data preprocessing, feature engineering, categorical encoding, and model evaluation. - Compared regression models using cross-validation and analyzed performance improvements.	
BridgeCare — AI Agent for Social Welfare Services <i>TypeScript, LLM APIs, Vercel</i>	GitHub
- Led a team in developing an AI-agent solution designed to streamline welfare applications for vulnerable groups. - Contributed to the end-to-end product workflow, including web development, LLM API integration, testing, and deployment. - Selected as a Top 8 finalist at the GDGoC Hackathon 2026 — Build with Agentic AI.	
VeriHK — Hong Kong ICT Competition 2026 Entry <i>TypeScript</i>	GitHub
- Developed a TypeScript web application submitted to the Hong Kong ICT Competition 2026. - Applied full-stack development workflow including implementation, API configuration, version control, and deployment.	

Technical Skills

Programming:	Python, C++, JavaScript, TypeScript
Data Science & ML:	Pandas, NumPy, scikit-learn, XGBoost, Matplotlib, Seaborn
AI & Development:	LLM APIs, Prompt Engineering, Supabase, Vercel
Tools:	Git, Jupyter Notebook, VS Code, Linux
Algorithms:	Data Structures & Algorithms, LeetCode (90+ problems)
