Education

City University of Hong Kong

Bachelor of Science in Computer Science; Minor in Mathematics

Hong Kong SAR

Expected 2029

- Cumulative GPA: **3.84/4.30**; Dean's List (Semester A & B, 2025/26).
- Full Scholarship recipient and Tiger Programme student.
- Relevant coursework: Linear Algebra, Calculus, Computational Probability Modeling, Business Statistics, Data Structures & Algorithms.

Research Experience

Time Series Modeling for Wireless Communications | Prof. Ka-Chun Wong

2026 – Present

- Conducting undergraduate research on time series modeling and forecasting for wireless communication data under faculty supervision.
- Performing exploratory analysis across time, frequency, and autocorrelation domains to characterize temporal patterns in sequential data.
- Building experimental workflows covering data preprocessing, model training, and quantitative performance evaluation.
- Implementing and comparing forecasting models including DLinear, TimesNet, and iTransformer using MAE, MSE, and RMSE.

Selected Projects

Kaggle Machine Learning Projects | Python, Pandas, scikit-learn, XGBoost

Kaggle

- Built end-to-end classification and regression pipelines for Titanic Survival and House Price Prediction, covering EDA, preprocessing, feature engineering, and model evaluation.
- Experimented with classical machine learning algorithms including Random Forest and gradient-boosting methods such as XGBoost.
- Applied cross-validation and performance metrics to compare models and analyze the impact of preprocessing and feature engineering choices.

BridgeCare — AI Agent for Social Welfare Services | TypeScript, LLM APIs, Vercel

GitHub

- Led a team in developing an AI-agent solution to streamline welfare applications, covering web development, LLM API integration, testing, and deployment.
- Selected as a **Top 8 finalist** at the **GDGoC Hackathon 2026 — Build with Agentic AI**.

VeriHK — Hong Kong ICT Competition 2026 | TypeScript, APIs, Vercel

GitHub

- Developed and deployed a TypeScript web application for the Hong Kong ICT Competition 2026.
- Applied an end-to-end development workflow covering implementation, API integration, version control, testing, and deployment.

Technical Skills

Programming:	Python, C++, JavaScript, TypeScript
Machine Learning:	NumPy, Pandas, scikit-learn, XGBoost, Matplotlib, Seaborn
AI & Development:	LLM APIs, Prompt Engineering, Supabase, Vercel
Tools:	Git, Linux, Jupyter Notebook, VS Code
Algorithms:	Data Structures & Algorithms, LeetCode (90+ problems)
